ITEM

19a. Give:
(1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method;
(2) the details of subsequent stages of selection and multiplication;
(3) evidence of uniformity and stability; and
(4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified

19b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:

(1) identify these varieties and state all differences objectively;
(2) attach replicated statistical data for characters expressed numerically and demonstrate that these are clear differences; and
(3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.

19c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.

19d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, *etc.*

19e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.

Origin and Breeding History of Ceb 9802- Ilias (Triticum aestivum L.)

1. Genealogy

Ilias is selected out of the following crossing:

Estica * Urban in 1988. Seed of Estica and Urban is available on the market.

In 1989 a single plant was selected in the F3, followed by line selection and replicated yield trials.

The breeding process was carried out at our breeding station in Lelystad in the Center of the Netherlands. This breeding station is situated on 150 ha reclaimed land on heavy clay soil and is equipped with all the necessary facilities including lab facilities and greenhouses.

2. Breeding goals

The breeding goals were:

Evidence of Uniformity and Stability of Ceb 9802 - Ilias

Ilias has been tested in official DUS tests the Czech Republic, European Community, Netherlands and in Poland in the years 1999-2003. Based on the results from these trials the following conclusions have been taken:

1. During the testing years no variants were observed, thus confirming the Uniformity of Ilias.

2. Over the years Ilias has proven to be a Stable variety.

STATEMENT OF DISTINCTNESS

Ceb 9802 - Ilias

Ilias has been tested in official DUS tests in Czech Republic, European Union, Netherlands and Poland from 1999 – 2003 and has been declared Distinct from all other known varieties at that time. However in our trials Ilias has been found to be most similar to Residence.

Although Ilias is most similar to Residence and Residence is most similar to Estica and Semper is most similar to Residence, Ilias is clearly distinguished from these varieties by the morphological characteristics, plant heigth, heading date (ear-emergence) and ear-length.

- Ilias is: more than 3 days earlier than Residence and Semper.
- Ilias is: 8 cm higher than Estica, 5 cm higher than Residence and 2 cm higher than Semper.
- Ilias has an ear-length which is: 10 mm longer than Estica, 14 mm longer than Residence and 15 mm longer than Semper.

Table: Morphological characters, Heading days, Plant Length and Ear length of Ilias, Estica, Residence and Semper. Trial-year 2001 – 2004, locations; Lelystad and Sibculo the Netherlands.
