THE UNITED STATES OF AMERICA

TO ALL TO WHOM THESE PRESENTS SHALL COME:

Asgrow Seed Company

Whereas, THERE HAS BEEN PRESENTED TO THE

Secretary of Agriculture

AN APPLICATION REQUESTING A CERTIFICATE OF PROTECTION FOR AN ALLEGED NOVEL VARIETY OF SEXUALLY REPRODUCED PLANT, THE NAME AND DESCRIPTION OF WHICH ARE CONTAINED IN THE APPLICATION AND EXHIBITS, A COPY OF WHICH IS HEREUNTO ANNEXED AND MADE A PART HEREOF, AND THE VARIOUS REQUIREMENTS OF LAW IN SUCH CASES MADE AND PROVIDED HAVE BEEN COMPLIED WITH, AND THE TITLE THERETO IS, FROM THE RECORDS OF THE PLANT VARIETY PROTECTION OFFICE, IN THE APPLICANT(S) INDICATED IN THE SAID COPY, AND WHEREAS, UPON DUE EXAMINATION MADE, THE SAID APPLICANT(S) IS (ARE) ADJUDGED TO BE ENTITLED TO A CERTIFICATE OF PLANT VARIETY PROTECTION UNDER THE LAW.

NOW, THEREFORE, THIS CERTIFICATE OF PLANT VARIETY PROTECTION IS TO GRANT UNTO THE SAID APPLICANT(S) AND THE SUCCESSORS, HEIRS OR ASSIGNS OF THE SAID APPLICANT(S) FOR THE TERM OF seventeen YEARS FROM THE DATE OF THIS GRANT, SUBJECT TO THE PAYMENT OF THE REQUIRED FEES AND PERIODIC REPLENISHMENT OF VIABLE BASIC SEED OF THE VARIETY IN A PUBLIC REPOSITORY AS PROVIDED BY LAW, THE RIGHT TO EXCLUDE OTHERS FROM SELLING THE VARIETY, OR OFFERING IT FOR SALE, OR REPRODUCING IT, IMPORTING IT, OR EXPORTING IT, OR USING IT IN PRODUCING A HYBRID OR DIFFERENT VARIETY THEREFROM, TO THE EXTENT PROVIDED BY THE PLANT VARIETY PROTECTION ACT (7 U.S.C. 2321 ET SEQ.)

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and $250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, National Agricultural Library, Beltsville, Maryland 20705. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

5 Give the date the applicant determined that he had a new variety based on (1) the definition in Section 41(a) of the Act and (2) the date a decision was made to increase the seed.

13a Give (1), the genealogy, including public and commerical varieties, lines, or clones used, and the breeding method. (2), the details of subsequent stages of selection and multiplication. (3), the type and frequency of variants during reproduction and multiplication and state how these variants may be identified and (4), evidence of stability.

13b Give a summary statement of the variety's novelty. Clearly state how this novel variety may be distinguished from all other varieties in the same crop. If the new variety most closely resembles one or a group of related varieties; (1) identify these varieties and state all differences objectively; (2) Attach statistical data for characters expressed numerically and demonstrate that these differences are significant; and (3) submit, if helpful, seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty.

13c Fill in the Exhibit C, Objective Description form for all characteristics, for which you have adequate data.

13d Describe any additional characteristics that are not described, or whose description cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the description of characteristics that are difficult to describe; such as; plant habit, plant color, disease resistance, etc.

14A If "YES" is specified (seed of this variety be sold by variety name only as a class of certified seed) the applicant may NOT reverse his affirmative decision after the variety has either been sold and so labeled or published or the certificate has been issued. However, if the applicant specifies "NO", he may change his choice. (See Section 180.15 of the Regulations and Rules of Practice.)

EXHIBIT A--Origin and Breeding History of ~~XP-C65~~ REVA Pea

The original cross, Champ x Neptune, was made in 1966 and ~~XP-C65~~ REVA has been developed by straight selection from this cross. Single plant selections were made through the F_6 in 1972. This line has been in replicated trials at the Asgrow Research Center since 1973. In July, 1973, it was determined that this line was a new, unique type and worthy of further increase and trial. The line was designated as ~~XP-C65~~ REVA in January, 1975.

Since 1972, the line has been refined through mass selection along with increase. Breeder's seed has been developed by growing approximately 250 progenies from single plant selections as a final test of homozygosity. The progenies were very uniform, but any progeny not perfectly true to type was eliminated. The remaining progenies were harvested together to become our Breeder's seed.

We have been able to find no variants in our Breeder's seed. ~~XP-C65~~ REVA is a stable, true breeding variety.

EXHIBIT B--Novelty Statement Concerning ~~XP-C65~~ REVA Pea

The commercial pea varieties most similar to ~~XP-C65~~ REVA to our knowledge are Trojan and Neptune. Comparative characteristics which make ~~XP-C65~~ REVA a different variety include, but are not restricted to, the following:

~~XP-C65~~ REVA Compared to Trojan

1. ~~XP-C65~~ REVA bears three or four flowers and sets two or three pods per node; whereas, Trojan is strictly double-flowered and sets one or two pods per node.
2. ~~XP-C65~~ REVA has a yellow-green foliage color similar to Neptune or Alaska; whereas, Trojan has a dark green foliage.
3. ~~XP-C65~~ REVA is quite tolerant to Powdery Mildew; whereas, Trojan is very susceptible.

~~XP-C65~~ REVA Compared to Neptune

1. Neptune is a freezer and ~~XP-C65~~ REVA is a canner.

We know of no other commercial varieties similar to ~~XP-C65~~ REVA. ~~XP-C65~~ REVA is another Asgrow line which came from the same original cross as ~~XP-C64~~ FARO. The two lines are very similar in practically all respects. However, ~~XP-C65~~ REVA is about one day later and nearly half a sieve size larger than ~~XP-C64~~ FARO. The following table summarizes data from four years at the Asgrow Research Center. There were two replications each year, and thus, each figure is the means of eight plots.

SIEVE SIZE DISTRIBUTION %

VARIETY	DEGREE DAYS	1	2	3	4	5	6	AVERAGE SIZE
~~XP-C64~~ FARO	1537	5	9	23	28	31	4	3.83
~~XP-C65~~ REVA	1518	7	14	30	32	17	--	3.38

Thus, it can be seen that there is an average of about 20 degree days in maturity, and this is supported by the fact that ~~XP-C65~~ REVA flowers one or two days ahead of ~~XP-C64~~ FARO.
