INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

Origin and Breeding History of the Variety

1. Vernon originated in Idaho in 1969 from a hand pollinated cross between a Washington State University P.I. line as the male parent and Western Valley Seed Co. Dark Greenⁿ Perfection as the female parent. ~~W.S.U.~~ W.S.U. 69011 (P.I. 206798) X 63928 Dark Green Perfection~~s~~.

2. This original cross was multiplied four generations through greenhouse and outside plot plantings. Pure line selections being made in the fifth generation. In the fall of 1971 this progeny was sent to New Zealand for testing. In 1972, back to New Zealand for a winter increase. This seed being returned in the spring of 1973 for planting in Company trials in the State of Washington. The 1973 State of Washington production of this variety is back to New Zealand for a 3rd winter increase during 1973-74. During this time tests were made by the U.S.D.A. Agricultural Research Station at Prosser, Washington and the Washington State University Northwest Washington Research and Extension Unit.

3. Stabilized in F₅. No variants in subsequent generation that would require roguing. *ltc 11/20/73 #47*

GROWERS OF CANNING AND FREEZING VARIETIES OF SEED PEAS

EXHIBIT B

Botanical Description of the Variety

Vernon is a mid-season Perfection type freezer pea. Plants are determinate, vigorous, double podded and is resistant to Race 5 Fusarium wilt.

This variety has good seedling vigor, Perfection type vine, internodes zigzag, semi-stiff straw with a 30^{7/8} inch plant height. The plant is medium heavy, will do some branching, node color is green, internodes being about two inches^{5/8}. First inflorescence being on the fourteenth node. Leaflets are paired two or more, medium wax, with marbling and dark green. Stipules are marbled, waxed, darker green than the leaflets and non clasping. Flowers are white with greenish venation and usually born as doubles. Generally the variety closely resembles Dark Green Perfection with a slightly smaller berry size.

Vernon has good growth habits and is resistant to Race 5 Fusarium wilt, which is extremely critical in some growing areas of the Pacific Northwest.

Data Indicative of Novelty

Western Valley Seed Co. is the Breeder of this Race 5 Fusarium wilt resistant strain of Dark Green Perfection peas. Retaining the characters of being a freezer variety of mid-season maturity, high yield potential with acceptable quality.

With Race 5 wilt resistance, production of a crop can be accomplished in an area where this wilt can be totally destructive.
