EXHIBIT A
ORIGIN AND BREEDING HISTORY

#6060 Freezer

Cross made in 1956 between Dark Skin Perfection, a standard commercial freezing variety, and New Season, a near wilt resistant canning pea released by the University of Wisconsin. This cross and the subsequent selection was made by Dr. Earl J. Renard, Ph. D. University of Wisconsin. Pure line selection made in 1960 after elimination of inappropriate or undesirable plant types and plants susceptible to root rots. This pure line has produced uniform progeny over several years with no consistently identifiable variants.

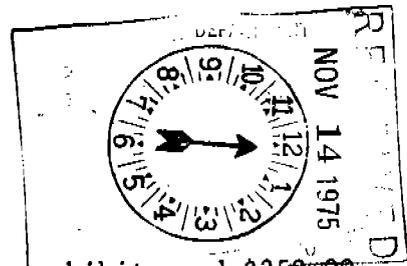

7600016

EXHIBIT B
BOTANICAL DESCRIPTION OF THE VARIETY

#6060 Freezer

Medium large sized, wrinkled seed with green cotyledons. Strong seedlings. Flowering occurs on the 11th, 12th, and 13th nodes with concentration on the 12th. The moderately indeterminate vine averages 27 inches in length, and is robust and medium heavy. Leaves are medium large and dark green. The well filled pods average three (3) inches in length, are predominantly doubled under reasonably favorable growing conditions, and show slightly tapered apices. The line is quite productive for its maturity class, and shows very good tolerance of Fusarium root rots.

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

EXHIBIT D
DATA INDICATIVE OF NOVELTY#6060 Freezer

Number 6060 Freezer is an early-midseason freezer most closely resembling Early Frosty. They can be distinguished, however, on the basis of seed color using the Royal Horticultural Society colour chart. #6060 seed color is 138 C while Early Frosty is 138 D. In addition, extensive studies by the marketing companies have established that the pod length of #6060 averages 3" and Early Frosty 3.5".

Comparison studies were carried out in 1976 and 1977. In these tests, paired plots of #6060 and Early Frosty were grown in heavily root rot infested ground. The 1976 growing season had a more severe level of root rot infection than in 1977. The higher tolerance of #6060 to severe root rot is shown by the yield data presented in Table I of the addendum to Exhibit D. #6060 yielded 70% more than Early Frosty. This difference is primarily due to reduced growth of Early Frosty. In 1977 there was no significant difference in yield of the two varieties because of the lower level of root rot activity.

In the 1977 test, however, significant differences between #6060 and Early Frosty were noted for seed number / pod (Table II); 100 seed weight (Table III); and percent of shattered (split) pods (Table IV). The values given within these plot comparisons are averages of ten plants within plots. Data on these characters was not available from the 1976 test. The 23% difference in splitting of mature pods was particularly noticeable.

STATEMENT OF THE BASIS OF APPLICANT'S OWNERSHIP

#6060 Freezer

Canners Seed Corporation, Lewisville, Idaho, is the sole, original, and first breeder of the #6060 Freezer variety of freezing peas for which it solicits a certificate of protection.

January 29, 1996

Mr. Hank Mende
Nunhems Seed Corporation
PO Box 18
221 E. Main Street
Lewisville ID 83431

Dear Mr. Mende:

SUBJECT: Withdrawing Plant Variety Protection for Certificates No:
