## Origin and Breeding History of the Variety

1. Gypsy originated in Idaho in 1969, from a hand pollinated cross between Valley Perfection and W.V. 159F, which is a cross of lines from the Geneva Station in New York, Faciated 28A X G58-475. The latter is the female parent.
2. This original cross was multiplied four generations through greenhouse and outside plot plantings. Pure line selections were made in the fourth generation in 1972. Pure line selections were based on the late maturity, adequate vine length, sturdy growth habits, with a very sturdy vine and good yielding ability. The variety exhibited potential for both freezing and canning.
3. Tests have been conducted for four years for maturity, yield and quality at European and American testing stations. Tests have also been conducted by commercial processors in the Mid-West. The variety shows very good standability with its sturdy vine type, and will often stand erect until green harvest time, and sometimes until the seed is mature. The variety is stable genetically. Rogue types, in trace amount of taller, lighter colored plants have been removed from the stock. These do not seem to occur.

EXHIBIT B

## Botanical Description of the Variety

1. Gypsy is a late, double podded type of pea that is used both for canning and freezing. Maturity normally would be four days later than Dark Green Perfection.
2. The variety is double podded, such as the Perfection type, but is sturdier and has a very stiff straw. It has an open type of growing habit.

EXHIBIT D

Data Indicative of Novelty

The variety 'Gypsy' <sup>most closely ~~AK~~ 10/11/77</sup> resembles Valley Perfection, one of it's parents.

1. Gypsy has a more sturdy vine than Valley Perfection. It is about 8 inches shorter than Valley Perfection.
2. The peas of Valley Perfection are pale green. It is a canning variety.  
The peas of Gypsy are medium green, round and is a freezing or a dual purpose variety.
3. The pod producing nodes of Gypsy are shorter than in Valley Perfection.
4. Gypsy is resistant to Powdery mildew. Valley Perfection is susceptible to Powdery mildew.
