INSTRUCTIONS

General: Send an original copy of the application and exhibits, at least 2,500 viable seeds, and \$500 fee (\$250 *filing fee* and \$250 *examination fee*) to U.S. Department of Agriculture, Agricultural Marketing Service, Livestock, Meat, Grain and Seed Division, Plant Variety Protection Office, National Agricultural Library Building, Beltsville, Maryland 20705. (See section 180.175 of the *Regulations and Rules of Practice.*) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

Item

- 9 Give the date the applicant determined that he had a new variety based on (1) the definition in section 41 (a) of the Act and (2) the date a decision was made to increase the seed.
- 14a Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method; (2) the details of subsequent stages of selection and multiplication; (3) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified and (4) evidence of uniformity and stability.
- 14b Give a summary statement of the variety's novelty. Clearly state how this novel variety may be distinguished from all other varieties in the same crop. If the new variety most closely resembles one or a group of related varieties: (1) identify these varieties and state all differences objectively; (2) attach statistical data for characters expressed numerically and demonstrate that these differences are significant; and (3) submit, if helpful, seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty.
- 14c Fill in the Exhibit C, Objective Description form, for all characteristics for which you have adequate data.
- 14d Describe any additional characteristics that are not described, or whose description cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the description of characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 15 If "Yes" is specified (*seed of this variety be sold by variety name only as a class of certified seed*) the applicant may **NOT** reverse his affirmative decision after the variety has either been sold and so labeled, his decision published, or the certificate has been issued. However, if the applicant specified "No," he may change his choice. (See section 180.16 of the *Regulations and Rules of Practice.*)

TOMATO

'Cherokee'

13A. Exhibit A:

Pedigree: 'Walter' x 'Ace 55VF'
↓
F₂ x 'Walter'
↓
F₇ = 'Cherokee'

'Cherokee', an inbred line in the F₇ generation, was developed by the pedigree system of breeding. An F₂ selection from the cross of 'Walter' x 'Ace 55VF' was crossed with 'Walter' and selfed to the F₇ generation. Single plant selections were made in the F₁ through F₄ generations and special bulks were made in the F₅ and F₆. Seedling inoculation tests in the greenhouse showed the F₂ and advanced generations to be homozygous resistant to race 1 (Ve gene) of Verticillium dahliae. The F₄ was determined homozygous resistant to races 1 and 2 (I, I-2 genes) of Fusarium oxysporum f. sp. lycopersici in greenhouse seedling inoculation tests.

'Cherokee' appeared stable and uniform in the F₄ through F₆ generations in research station plots and in trials of several thousand plants in grower fields. The only offtypes observed were infrequent male steriles, which did not exceed the percentage normally seen in other varieties.

8200075

13B. Exhibit B. Novelty Statement

'Cherokee' is most similar to 'Walter'. 'Cherokee' differs from 'Walter' in having the u and Ve genes, both derived from 'Ace 55VF'. The u gene gives uniform green **shoulder** color of unripe fruit, and the Ve gene confers resistance to race 1 of Verticillium dahliae.

13D. Exhibit D. Additional Description of 'Cherokee'

'Cherokee' has been similar to 'Flora-Dade' in total yield and yield of U.S. Combination Grade fruit. On Verticillium-infested soils, yields of 'Cherokee' have been almost double those of 'Walter' (Tables 1 and 2).

'Cherokee' has been similar to 'Flora-Dade' in percent of fruit in U.S. Combination and cull grades and has had higher percent U.S. Combination Grade and lower percent cull grade than 'Walter' (Tables 3 and 5).

'Cherokee' was similar to 'Flora-Dade' in 3 of 4 seasons for yield of fruit during the first 2 weeks of harvest. (Table 2).

Incidence of fruit cracking in mid and late season has been similar for 'Cherokee', 'Walter', and 'Flora-Dade' (Table 4).

Fruit size of 'Cherokee' has exceeded that of 'Flora-Dade' in all trials and has generally exceeded that of 'Walter' (Tables 5 and 6).
