ITEM

- 18a. Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method
(2) the details of subsequent stages of selection and multiplication;
(3) evidence of uniformity and stability; and
(4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified
- 18b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:
(1) Identify these varieties and state all differences objectively;
(2) attach statistical data for characters expressed numerically and demonstrate that these are clear differences; and
(3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.
- 18c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 18d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 18e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
19. If "Yes" is specified (*seed of this variety be sold by variety name only, as a class of certified seed*), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).
22. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.
23. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.

21. CONTINUED FROM FRONT (Please provide a statement as to the limitation and sequence of generations that may be certified.)

22. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

23. CONTINUED FROM FRONT (Please give the country, date of filing or issuance, and assigned reference number, if the variety or any component of the variety is protected by intellectual property right (Plant Breeder's Right or Patent).)

ORIGIN AND BREEDING HISTORY

- Winter 1991-92 -
- Summer 1992 Original cross and first backcross made between DPX 2384, an experimental breeding line and Roundup Resistant experimental line 40-3-2
- Fall 1992 DP 415 crossed with Roundup resistant F₁ plants from 2384 BC₁F₁
- Winter 1993 P9592 crossed to Roundup resistant F₁ plants from DP415 x 2384 BC₁F₁
- Summer 1993 Cross 93408 made - A5979 crossed to Roundup resistant F₁ plants from P9592 x (DP 415 x 2384 BC₁F₁)
- Winter 1993-94 Roundup tolerant F₁ plants advanced to F₂ under lights from cross 93408 under lights in Costa Rica and F₂ seed was bulked.
- Summer 1994 Roundup resistant F₂ advanced to F₃ by modified single seed descent in Costa Rica
- Fall 1994 Roundup resistant F₃ plants space planted. Individual plant selections harvested and threshed separately
- Winter 1994-95 F₄ Roundup resistant plant rows from cross 93408 were grown in 3 meter rows in Costa Rica. Row 93408-747 was selected, composited and determined to be stable and breeding true for characteristics described in Exhibit C of this application. No variants were known or observed at this time and hence to the present.
- Summer 1995 Yield tested at Scott, Mississippi.
- Fall 1995-
- Spring 1996 Border rows harvested and sent to Costa Rica for a double increase in fall of 1995 and winter of 1996. About 150 units of breeder seed were produced.

Summer 1996 93408-747 yield tested in 9 D&PL Technology Holding Corp.'s tests. 93408-747 was increased to 3574 bushels of foundation seed. 93408-747 was designated as DPX9760RR.

Over all years and generations of testing, beginning with Winter, 1994-95, through the summer of 1996, covering four generations, no variants in flower color, pubescence color, or hilum color were observed. DPX 9760 RR was determined to be uniform and stable for all characteristics described within this application.

Summer 1997 DPX 9760RR designated and released as DP 6200 RR.

EXHIBIT D**DP 6200 RR****ADDITIONAL DESCRIPTION OF VARIETY**

DP 6200 RR is an F₃ Roundup tolerant selection composited in the F₄ generation from the cross of A5979 x [P9592 x (DP 415 x 2384 BC₁F₁)]. Roundup tolerance is derived from line 40-3-2 soybean. DP 6200 RR has white flowers, gray pubescence, and tan pods. Seeds average 2900 seeds per pound and are dull yellow with buff to imperfect black hila as affected by environment. DP 6200 RR is resistant to races 3 and 14 of soybean cyst nematode and soybean mosaic virus. It is moderately resistant to stem canker and frogeye leaf spot. It is susceptible to root knot nematodes and sensitive to high chloride soils. DP 6200 RR, based on 9 D&PL tests across the South, show that it is competitive in yield to other varieties such as DP 3588 and AG6101RR.
