ITEM

- 18a. Give:
- (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method;
 - (2) the details of subsequent stages of selection and multiplication;
 - (3) evidence of uniformity and stability; and
 - (4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified

- (1) identify these varieties and state all differences objectively;
 - (2) attach statistical data for characters expressed numerically and demonstrate that these are clear differences; and
 - (3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.

- 18d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 18e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
19. If "Yes" is specified (*seed of this variety be sold by variety name only, as a class of certified seed*), the applicant **MAY NOT** reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).
22. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.

PLATA WHEAT

Exhibit A. Breeding History

Plata wheat is the result of hybridization, individual plant and bulk selection from the cross Tadorna/PB775//Express. Tadorna is a Septoria leaf blotch resistant line obtained from the University of California, Davis. Probrand 775 is a wheat from the once existant Northrup King, Co. breeding program. Express is a variety developed by Western Plant Breeders.

The last cross involving Express as a parent was made in 1992 at Woodland, Ca. and the F1 was grown in Gonzales, Ca. All even numbered plant selection generations were grown at Woodland while all odd numbered ones were grown at Gonzales. In 1994 the F4 generation was bulk harvested and in 1995 the F5 seed was entered into a preliminary yield trial. In 1996 spike samples were taken from the bulk population and grown as head rows. Head rows homozygous for white seed color were selected to obtain both individual heads and bulk seed. This procedure of head to row selections continued until 1999 whereupon a single head row bulk selected for uniformity to type were advanced to our Gonzales location for a breeder seed increase. Foundation seed was produced in crop year 2000. The criteria for selection for each generation in the development of Plata are outlined in Table A1.

On the basis of our experience of producing pre-breeder, breeder and foundation seed, the variety Plata appears to be uniform and stable, except it has been noted during seed multiplication that taller variants can be found in this variety at a frequency of no more than 0.5%. Additionally, a red seeded variant is present at a frequency of no more than 100 seeds per pound.

Exhibit B. Statement of Distinctness

Plata is most similar to the variety, Blanca Grande, which is another new hard white wheat from Resource Seeds. Compared to previously marketed varieties, Plata is most similar to the variety, Klasic. All three are hard white wheat. Plata differs from Blanca Grande in having white auricles while those of Blanca Grande are purple, and having lower test weight (Table B1) and kernel weight (Table B2). Plata differs from Klasic in being less susceptible to leaf rust (Table B3), and taller (Table B4).
