Cotton Varieties Planted, United States
1983 Crop

Deltapine and Stoneville were the leading varieties of upland cotton planted in the United States in the 1983-84 season, according to the Cotton Division, Agricultural Marketing Service, USDA. These varieties accounted for 16 percent each of the acreage planted. Acala was the next most popular variety with 14 percent of the acreage, followed by Lankart, Paymaster and Tamcot with 9 percent each.

Deltapine and Stoneville were the leading varieties of upland cotton planted in the United States in 1983. Each accounted for 16 percent of the acreage planted. Deltapine was the leading variety planted in Arizona and Louisiana this season and accounted for 16 percent of the acreage planted a year earlier. Stoneville was the leading variety planted in Alabama, Arkansas, Mississippi, Missouri and Tennessee in 1983 and accounted for 21 percent of the 1982 acreage. Deltapine 41 was the most popular Deltapine strain, accounting for 6 percent of the 1983 U. S. acreage. Other Deltapine strains accounting for one percent or more of the U. S. acreage included: Deltapine 55, Deltapine 61, Deltapine 90 and Deltapine NSL. The most popular Stoneville strain was Stoneville 825 which accounted for about 12 percent of the U. S. acreage. Other Stoneville strains accounting for one or more percent of the acreage included: Stoneville 213 and Stoneville 506.

The next most popular variety of cotton planted in the United States in 1983 was Acala, accounting for 14 percent of the acreage. This was the same proportion as a year earlier. Acala was the leading variety planted in California and New Mexico. Acala SJ-2 was the most popular strain planted in California and accounted for 9 percent of the U. S. acreage. The leading strain in New Mexico was Acala 1517-75.

Lankart, Paymaster and Tamcot were the next most popular varieties planted in the United States, accounting for 9 percent, each, of the acreage. A year earlier, Lankart accounted for 8 percent, Paymaster 5 percent and Tamcot 10 percent of the acreage. Lankart was the most popular variety planted in Oklahoma. The most popular strain was Lankart 611 which accounted for 4 percent of the U. S. acreage. Paymaster was the leading variety planted in Texas and the most popular strain was Paymaster 145 at 3 percent of the U. S. acreage. Tamcot was the second leading variety planted in Texas. Tamcot CAMD-E and Tamcot SP21 were the most popular strains and accounted for 3 percent, each, of the U. S. acreage.

Pima S-5 remained the most popular strain of American Pima cotton planted in the United States for the 1983-84 season. Pima S-5 made up about 69 percent of the U. S. acreage planted, down from 91 percent a year earlier. Pima S-6 accounted for 31 percent of the U. S. acreage in 1983 and was planted primarily in Arizona.

Estimates of the percentage of the various varieties of cotton planted in the United States in 1983 by counties, marketing services office areas and states are presented in this report. The variety data are based primarily on estimates furnished by cotton ginners for the territories served by their gins.

^{1/} COMPILED FROM "SUMMARY OF COTTON FIBER AND PROCESSING TEST RESULTS, CROP OF 1982," USDA, AMS, COTTON DIVISION, MAY 1983.

^{2/} MICRONAIRE READING IS A MEASURE OF FIBER FINENESS AND MATURITY. THIS TEST MEASURES THE RESISTANCE OF A PLUG OF COTTON TO AIR FLOW.

^{3/} FIBER STRENGTH AS MEASURED ON A HIGH VOLUME INSTRUMENT (HVI) SYSTEM USING A 1/8-INCH GAGE SPACER BETWEEN THE CLAMP JAWS (1/8-INCH GAGE).

^{4/} HVI UPPER HALF MEAN LENGTH IS THE AVERAGE LENGTH OF THE LONGEST ONE-HALF OF THE FIBERS. LENGTH UNIFORMITY IS A MEASURE OF THE DEGREE OF UNIFORMITY OF FIBERS IN A SAMPLE. IT IS EXPRESSED AS AN INDEX OF THE MEAN/UPPER HALF MEAN LENGTH RATIO.
