

Cotton Varieties Planted, United States  
1984 Crop

Deltapine and Stoneville were the leading varieties of upland cotton planted in the United States for the 1984-85 season, according to the Cotton Division, Agricultural Marketing Service, USDA. These varieties accounted for 17 percent each of the acreage planted. Acala was the next most popular variety with 12 percent of the acreage, followed by Paymaster with 10 percent and Lankart and Tamcot with 7 percent each. Sixteen varieties accounted for one percent or more of the U. S. acreage.

Deltapine and Stoneville were the leading varieties of upland cotton planted in the U. S. in 1984. Each accounted for 17 percent of the acreage planted, up from 16 percent each a year earlier. Deltapine was the leading variety planted in Arizona and Louisiana this season and was the second most popular variety planted in Alabama, Arkansas, California, Mississippi and Missouri. Deltapine 41 was the most popular Deltapine strain, accounting for 7 percent of the 1984 U. S. acreage. Stoneville was the most popular variety planted in Alabama, Arkansas, Mississippi, Missouri and Tennessee and was the second leading variety in Louisiana. Stoneville 825 was the most popular Stoneville strain, accounting for 11 percent of the U. S. acreage.

The third most popular variety of upland cotton planted in the U. S. in 1984 was Acala. This variety accounted for 12 percent of the planted acreage, down from 14 percent a year earlier. Acala was the most popular variety planted in California and New Mexico. Acala SJ-2 was the most popular strain planted in California and accounted for 9 percent of the U. S. acreage. The leading strain in New Mexico was Acala 1517-75.

Paymaster was the fourth most popular variety planted in 1984 and accounted for 10 percent of the U. S. acreage, up from 9 percent the previous year. Paymaster was the leading variety planted in Texas and the second most popular variety in New Mexico. The most popular Paymaster strain was Paymaster 145 which accounted for 4 percent of the U. S. acreage.

Lankart and Tamcot varieties accounted for 7 percent each of the U. S. acreage planted, down from 9 percent each a year earlier. Lankart was the leading variety planted in Oklahoma. The most popular strain was Lankart 611 which accounted for 3 percent of the U. S. acreage. Tamcot was the second leading variety planted in Texas and Oklahoma. The most popular Tamcot strain was Tamcot SP21 which accounted for 3 percent of the U. S. acreage.

Pima S-6 was the most popular strain of American Pima cotton planted in the U. S. for the 1984-85 season. Pima S-6 made up about 93 percent of the U. S. acreage planted, up from 31 percent a year earlier. Pima S-5, at 7 percent, accounted for the remainder of the American Pima acreage. Pima S-5 accounted for 69 percent of the acreage planted in 1983.

Estimates of the percentage of the various varieties of cotton planted in the United States in 1984 by counties, marketing services offices and states are presented in this report. The variety data are based primarily on estimates furnished by cotton ginners for the territories served by their gins.

1/ Compiled from "Summary of Cotton Fiber and Processing Test Results, Crop of 1983," USDA, AMS, Cotton Division, May 1984.

2/ Micronaire reading is a measure of fiber fineness and maturity. This test measures the resistance of a plug of cotton to air flow.

3/ Fiber strength as measured on a high volume instrument (HVI) system using a 1/8-inch gage spacer between the clamp jaws (1/8-inch gage).

4/ HVI upper half mean length is the average length of the longest one-half of the fibers. Length uniformity is a measure of the degree of uniformity of fibers in a sample. It is expressed as an index of the mean/upper half mean length ratio.
