

Cotton Varieties Planted, United States 2002 Crop

The Deltapine brand of upland cottonseed was the most popular planted in the United States for the 2002-2003 season, according to the USDA, Agricultural Marketing Service's Cotton Program. The Paymaster brand was the second most popular followed by Stoneville, Aventis, Sure-Grow, All-Tex, Phytogen, and CPCSD.

Transgenic varieties - genetically engineered varieties resistant to worms, herbicides, or both - accounted for about 77 percent of the upland cotton planted in the United States in 2002. This is down about 1 percentage point from the 2001 crop, but up some 5 percentage points from the 2000 crop. Usage of transgenic varieties in 2002 varied from a high of 99 percent in Kansas to a low of 42 percent in California. Texas producers planted transgenic varieties to 60 percent of their 5.8 million cotton acres.

Deltapine brand varieties were the most popular planted in 2002, accounting for 32.2 percent of the United States acreage. This brand accounted for 57.5 percent of the acreage planted in the southeastern states (Alabama, Florida, Georgia, North Carolina, South Carolina, and Virginia). It accounted for 27.5 percent of the acreage planted in the south central states (Arkansas, Louisiana, Mississippi, Missouri, and Tennessee), 19.7 percent in the southwestern states (Texas, Oklahoma, and Kansas), and 36.3 percent of the acreage planted in the western states (Arizona, California, and New Mexico). Deltapine's most popular varieties were DP 451 B/RR, DP 458 B/RR, DP 5415 RR, and DP 5690 RR, accounting respectively for 6.9, 6.0, 4.1, and 3.4 percent of the U.S. cotton acreage.

Paymaster brand varieties were the second most popular planted in 2002, accounting for 26.2 percent of the United States acreage. These varieties accounted for 3.3 percent of the acreage planted in the southeastern states, 23.3 percent in the south central states, 44.5 percent in the southwestern states, and 0.6 percent in the western states. The most popular Paymaster varieties were PM 1218 BG/RR, PM 2326 RR, and HS 26, accounting respectively for 6.4, 6.1, and 3.0 percent of the U.S. acreage.

Stoneville varieties were the third most popular planted in 2002. These varieties accounted for 13.1 percent of the acreage planted. They accounted for 9.7 percent of the acreage planted in the southeastern states, 31.6 percent of the acreage in the south central states, 5.2 percent in the southwestern states, and 0.8 percent in the western states. The most popular Stoneville varieties were ST 4892BR and ST 4793R, accounting respectively for 5.7 and 3.2 percent of the United States acreage planted to cotton.

Aventis varieties were the fourth most popular planted in 2002. These varieties accounted for 10.5 percent of the U.S. acreage and accounted for 14.0 percent of the southeastern states planted acreage, 3.0 percent in the south central states, 14.2 percent in the southwestern states, and 1.1 percent in the western states. The percentage of acres planted to Aventis varieties more than doubled from the 2001 crop.

Suregrow varieties were the next most popular and accounted for 7.2 percent of the U.S. acreage planted in 2002. All-Tex varieties, planted primarily in Texas, Oklahoma, and Kansas, were the sixth most popular and accounted for 4.2 percent of the 2002 cotton acreage. Acres planted to All-Tex increased sharply in 2002.

Phytogen was the most popular brand of American Pima planted in 2002. Phytogen variety PHY 76 Pima accounted for 66.5 percent of the United States Pima acreage and was the most popular variety planted in California (76.4 percent of California Pima acreage). Deltapine's DP 744 Pima was the second most-planted American Pima variety and accounted for 11.3 percent of the U.S. crop. Deltapine's DP 340 Pima was the next most popular variety and accounted for 9.0 percent of the U.S. Pima acreage. The most popular Pima varieties in Arizona were CPCSD Pima S-7 (39.8 percent) and Deltapine DP HTO Pima (35.9 percent).

Estimates of the percentage of the various varieties of cotton planted in the United States for 2002 were based on informal surveys made by the Cotton Program Classing Offices. Those surveyed included ginners, seed dealers, extension agents, and other knowledgeable sources.
